

Apprenticeships Germany

Industrial ceramist

- Length of apprenticeship: 3 years

Industrial ceramists produce our ceramic products. They operate, re-fit, maintain and repair the production equipment (e.g. presses, mixing plants and furnaces). They monitor the entire production process from the preparation of raw materials, mixing and moulding to drying and firing. They ensure product and process quality, for example by carrying out physical and chemical analyses of intermediate and end products.

Sites: Mainzlar/Nierdollandorf

Industrial electronics technician

- Length of apprenticeship: 3 1/2 years

Electronics technicians install, maintain and repair electrical equipment and production equipment. Electronics technicians in our plants are employed largely in start-up, repair and maintenance. They start up and re-fit equipment, install and programme the plant control software and deal with faults.

Sites: Duisburg/Mainzlar/Urmitz

Machinist

- Length of apprenticeship: 3 1/2 years

Machinists manufacture metal precision parts using processes such as turning, milling and cutting and usually work with CNC machine tools. They set up and programme these tools and monitor the production process. Machinists at our plants are employed largely in the manufacture and installation of metal moulds required for the production of moulded refractory products.

Sites: Nierdollandorf

Woodwork technician

- Length of apprenticeship: 3 years

Woodwork technicians control and monitor machines for processing wood and similar materials. Woodwork technicians in our plants are trained mainly to work in mould-making plants where complex wooden or synthetic moulds in a range of different geometric forms are built according to design drawings. The moulds manufactured are needed for the production of our refractory ceramic products.

Sites: Nierdollandorf

Mechatronics technician

- Length of apprenticeship: 3 1/2 years

Mechatronics technicians are employed in the installation and maintenance of mechanical, electrical and electronic systems. Mechatronics technicians in our plants are employed largely as “all-rounders” in repair, maintenance and trouble-shooting for machines and equipment.

All sites (except Wiesbaden).

Industrial mechanic

- Length of apprenticeship: 3 1/2 years

Industrial mechanics set up our production equipment and also work on refitting, repair and maintenance. Industrial mechanics in our plants are employed largely in the mechanical repair and maintenance of various machines and pieces of equipment.

All sites (except Wiesbaden).

Engineering draughtsman/woman – machine and plant technology

- Length of apprenticeship: 3 years

Engineering draughtsmen/women produce detailed drawings and plans following specifications given by designers and engineers. They work on the development and modernisation of new manufacturing concepts and produce technical drawings for implementing these concepts.

Sites: Niederdollendorf/Urmitz

Industrial clerk

- Length of apprenticeship: 3 years

Industrial clerks deal with all commercial and administrative areas such as purchasing, sales and marketing; human resources, finance and accounting and are therefore

Sites: Duisburg/Mainzlar/Urmitz/Wiesbaden
